

Why Green just comes naturally to us

2

Performance like ours is why homebuilders and remodelers have voted Therma-Tru doors the most preferred brand for more than a decade.

The color of commitment.

A lot of companies are talking Green these days. We've lived it for the last 25 years. From 1983, to be exact – the year we introduced the industry's very first energy-efficient fiberglass door. More durable and energy efficient than wood doors, fiberglass doors represent a significant savings in precious natural resources. Our fiberglass doors were – and still are today – just, naturally, more environmentally responsible.

Over the years, Therma-Tru[®] has worked diligently to expand its commitment to protecting the environment. Not only to ensure that our products remain energy-efficient but to see that our manufacturing processes and corporate policies reflect responsible environmental and community consciousness. At Therma-Tru, Green is much more than just something to talk about. It's, quite simply, the way we do business.

Therma-Tru helps you keep the savings inside.

Homeowners want more than a beautiful entryway – they want energy efficiency. That's exactly what Therma-Tru entry and patio door systems offer, in any region or climate zone. In fact, approximately 98% of all Therma-Tru products are ENERGY STAR[®] qualified.

Here are just some of the features that help our doors earn their ENERGY STAR[®] rating:

◆ A polyurethane foam core. Offering up to five times the insulation value of a wood door and ozone-friendly CFC-free, it's a key element of every Therma-Tru door system.

Energy-efficient glass. All of the decorative glass in our doors, sidelites and transoms is sealed between two panes of tempered glass. This important design feature contributes to the excellent thermal properties necessary to qualify for ENERGY STAR.®

Complete systems. Therma-Tru doors are designed as complete systems with components that work together. This ensures a very tight seal and provides additional energy savings.

Doors so durable, you may never need another.

A Therma-Tru fiberglass door won't crack, swell, split or rot like wood doors. Install one with our complete system, and your Therma-Tru door is warranted against defects in

materials and workmanship for as long as you own your door system – long after other doors are ready for replacement.

In making such a lasting, durable door, we also believe it's our responsibility to contribute to the sustainability of our planet. Which is why, from the beginning of our manufacturing processes

to the end, we continually search for innovative, new solutions that can help us reduce the amounts of energy we use, as well as help us increase our recycled product content.

Nany of the wood products used in our door frame components come from managed forests. We partner with wood suppliers who meet sustainable forestry certification standards.

→ Therma-Tru's proprietary AccuGrain[™] Technology on Classic-Craft[®] styles captures the fine detail of genuine, high-end wood doors without harvesting endangered wood species like Honduran Mahogany.

→ We use recycled products like wood chips, diapers and plastic bottles for the composite materials used in the top and bottom of our doors.

→ All Therma-Tru facilities take special measures to ensure that associates and processes recycle waste products. Working with several waste management organizations, we recycle such products as paper, plastic, cardboard, steel, propane canisters, wood, cut-outs and scrap doors.

№ We recycled nearly 23% of the waste stream at our Indiana and Oklahoma facilities in 2006 and increased those results to 30% in 2007.

№ We donate excess inventory to charitable organizations such as Habitat for Humanity, HomeAid and The Storehouse by World Vision.

Let Therma-Tru bring ENERGY STAR[®] savings to you.

Since our founding in 1962, Therma-Tru has enjoyed a distinguished reputation for bringing homeowners doors and entryways that are beautiful, durable and energy efficient. To find out how our ENERGY STAR® rated entry and patio door systems can bring higher efficiency and lower energy bills to your home, please visit www.thermatru.com.

Holding ourselves to the highest building standards of all – Green.

Therma-Tru products can contribute to a variety of Green building standards, including:

The Green Globes program – Therma-Tru doors can help contribute up to 100 points for Energy Performance, 114 points for Reduced Energy Demand and 20 points for Thermal Comfort.

The LEED[™] program –
Therma-Tru doors can help contribute to the Energy,
Materials and Innovation and Design categories.

∾ NAHB National Green
 Building Standard –

Therma-Tru doors can help contribute up to 128 points because they help exceed required energy codes and are part of an on-site third-party inspection.

Therma-Tru is a proud member of:

Environmental standards for printing:

MOHAWK

NARI

NATIONAL MEMBER

ENERGY STAR[®] products are the smart consumer choice.

ENERGY STAR[®] is a joint program of the U.S. Environmental Protection Agency and U.S. Department of Energy devoted to helping homeowners reduce energy consumption and eliminate greenhouse gases.

For any door to be ENERGY STAR® rated, it must be tested against National Fenestration Rating Council standards for U-values and solar heat gain. The lower the U-value, the higher the efficiency. Therma-Tru® doors are designed to offer the best possible U-values and solar heat gain.

To learn more about ENERGY STAR[®], compare your energy costs to those of similar homes across the country or find recommendations on how to improve your home's efficiency, visit www.energystar.gov. To find out which Therma-Tru products qualify for ENERGY STAR[®], visit www.thermatru.com.
