

SIMPSON CUSTOM DOORS

Simpson Custom Doors.

It was Henry McCleary who first caught the vision. Where others saw nothing but trees and hills, Henry saw the perfect setting for crafting doors. Drawing from the inspiring beauty of the Pacific Northwest, he built a door business from scratch that would earn a reputation for meticulous quality and superb design.

Today, nearly a century later, that vision still drives us. As one of the oldest continuously operating door plants anywhere, Simpson boasts a rich heritage. And the pioneering spirit is still with us, as we integrate state-of-the-art technology with our 100 years of know-how.

Now we have taken our expertise to another level, with our new door manufacturing facility in Centralia, Washington, dedicated exclusively to building custom doors.

You can count on the same Simpson services you've come to expect: Quick lead times. Simpson Certified Quality craftsmanship. Rigorous inspections prior to any order being shipped. And meticulous packaging preparations to ensure that your custom door arrives safely and in perfect condition.

Call us today to find out how easy special orders can be when you're working with Simpson.

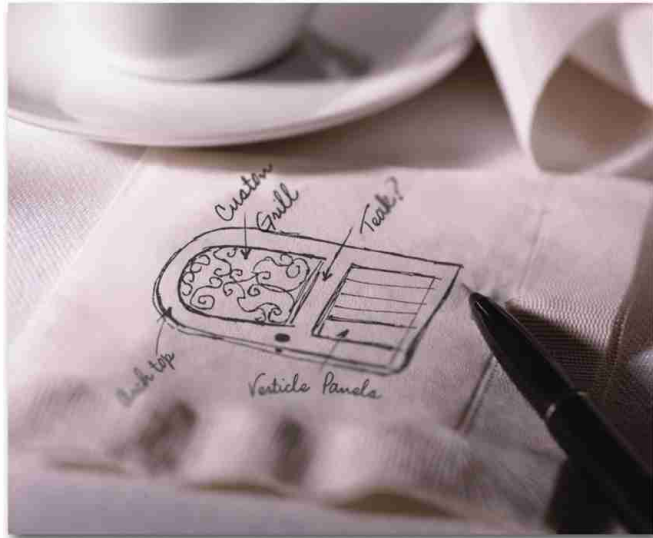

*"Nothing showcases
Simpson quality better
than our custom doors.
We take great pride in each
one we build."*

Simpson
CUSTOM
DOORS

It starts with an idea...

With Simpson, the process of creating a unique, signature door is smooth and simple. It all begins with a few key selections you determine are best for your needs. Then, using the design, materials and dimensions that you specify, Simpson can create your masterpiece. Whether we construct your door with engineered components or solid lumber, we will incorporate both technology and beauty into your individual design.

Design Flexibility

Thanks to the advanced technology in our manufacturing process, we can now accept your sketches and descriptions and turn them into reality. Simply provide us with the design concept you have in mind, and our engineers will determine how to translate it into a truly one-of-a-kind door.

...and we bring it to life.

To define your dream door, consider each of the following issues carefully:

Architectural Style

How would you describe the home where this door will be installed? Is it Colonial? Craftsman? Modern? Your answer will influence the style of door you choose to design.

You can define the look right down to the detailing (see the back of this brochure for detailing options). The more specific you can be in your description, the more the end result will reflect what you had in mind.

Special Sizes & Shapes

Some applications require doors with unusual dimensions. We can construct doors to meet a wide variety of sizes, up to 5' wide, 2-1/4" thick and heights above 8'0". And because of the technology we employ, radius designs, arches, curves and unusual shapes can be constructed very easily.

Materials

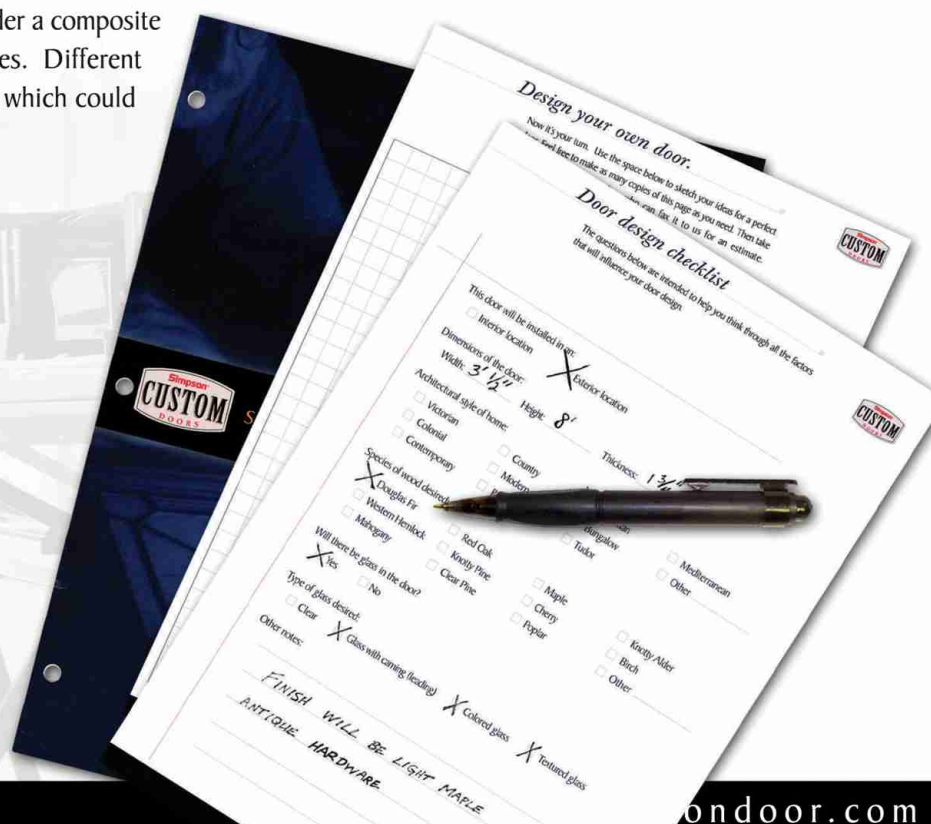

Do you envision an all-wood door, or one with some glass? We can give you everything from a small speaking port to multi-paned openings. Read more about your options on the following pages.

Finishing

How you plan to paint or stain the door can have a direct impact on how your door is designed and built. For example, if the door will be painted, you might want to consider a composite door that offers unique machining possibilities. Different species of wood also accept stain differently, which could impact your choice.

"It's really as simple as jotting down a few ideas. We can take it from there to create the finished product."

Dimensions in glass.

A wide range of patterns and textures make glass an outstanding way to personalize any door. From Simpson's trademark decorative glass inserts to our broad selection of tempered glasses, we have the options you need for the look you want.

Standard Caming Color Options

Silver Caming

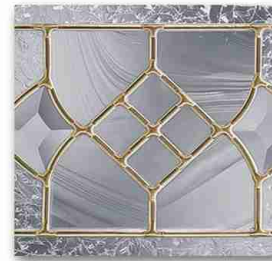

Silver adds an updated touch and blends seamlessly with today's home hardware.

Black Caming

Black can create a feel that is either rustic or old world refined, depending on the design.

Brass Caming

The traditional color used in our inserts, brass has a soft gloss finish that continues to send a message of luxury.
